Yours,
Xenemetrix Team

Solution Highlight

We are pleased to announce the start of a pilot project which will be carried out with one of the world's largest container shipping companies, whose head offices are located in Israel (the "Collaborator"). The pilot project involves the installation of Xenemetrix's new Petro-Marine™ ED-XRF monitoring system at the Collaborator's hub in its main port. The installed system will serve the Collaborator to manage its fleet, which mounts to more than 100 marine vessels.

This pilot program will allow Xenemetrix to field test its onboard solution and offer the Collaborator early access to this state-of-the-art technology. Upon the successful completion of this pilot project the Collaborator will consider implementing Xenemetrix's solution at additional seven of its shipping hubs worldwide.

Petro-Marine™ is an onboard or hub-based X-Ray Fluorescence analysis and monitoring solution that facilitates regular and timely compliance of marine vessels with new and existing international regulations, and enhances the preventative maintenance process - leading to significant savings in operational costs.

The target market for the Petro-Marine™ system is merchant ships, of which approximately 55,000 are currently in service around the globe, including: bulk carriers, dry cargo vessels, multi-purpose vessels, container vessels, tankers, liquid petroleum gas, liquid natural gas and most cruise ships.

We invite you to be part of the network addressing the Petro-Marine™ solution in the countries of your operation.
